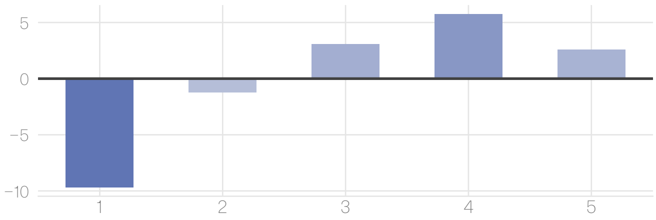
Open Interest Divergence



Quantifies open interest divergence and systematically takes positions, aiming to capitalize on behavioral inefficiencies.

The index capitalizes on the persistent relationship between open-interest dynamics and future asset performance, systematically identifying and exploiting divergence in open-interest patterns across assets.

The universe consists of the most liquid and actively traded assets, identified on a rolling basis and survivorship-bias free. Positions are scaled by the inverse of rolling volatility; the factor is available point-in-time with hourly updates.

CUMULATIVE RETURN

Note – Performance is for an illustrative single-factor portfolio (positions sized proportionally to the factor signal across the Top 40 universe, rebalanced daily); demonstrative only, not a tradable product. Past performance is not indicative of future results.

Factor Analysis

Download Factor Data (CSV) →

Diagnostics on the raw factor values, independent of portfolio construction: the quantile and IC plots show whether the signal cross-sectionally separates out- from under-performers, and how consistently. Computed point-in-time on the rolling Top 40 universe (the live factor spans many more tokens – see the raw factor-data CSV in the data room).
