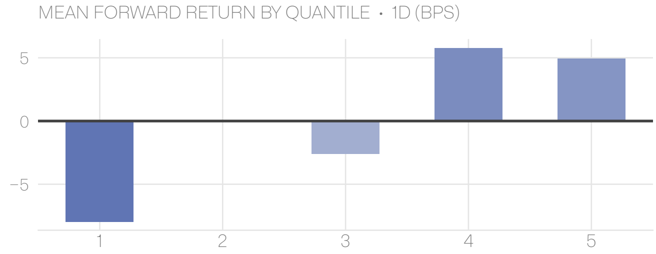
Margin Risk

Assets with higher at-risk-of-liquidation positions tend to underperform less leveraged assets.



The factor capitalizes on the tendency of assets with higher at-risk-of-liquidation positions to underperform less leveraged assets. It predicts positions vulnerable to forced closure at 1%, 2%, 5% and 10% deviations from the current price, aggregated from the top ten most reputable exchanges.

The universe consists of the most liquid and actively traded assets, identified on a rolling basis and survivorship-bias free. Positions are scaled by the inverse of rolling volatility; the factor is available point-in-time with hourly updates.

EXAMPLE TOP 40 CROSS-SECTIONAL PORTFOLIO

Long and short the dynamic, rolling Top 40 universe (point-in-time), sized by the factor's cross-sectional strength. Rebalanced daily.

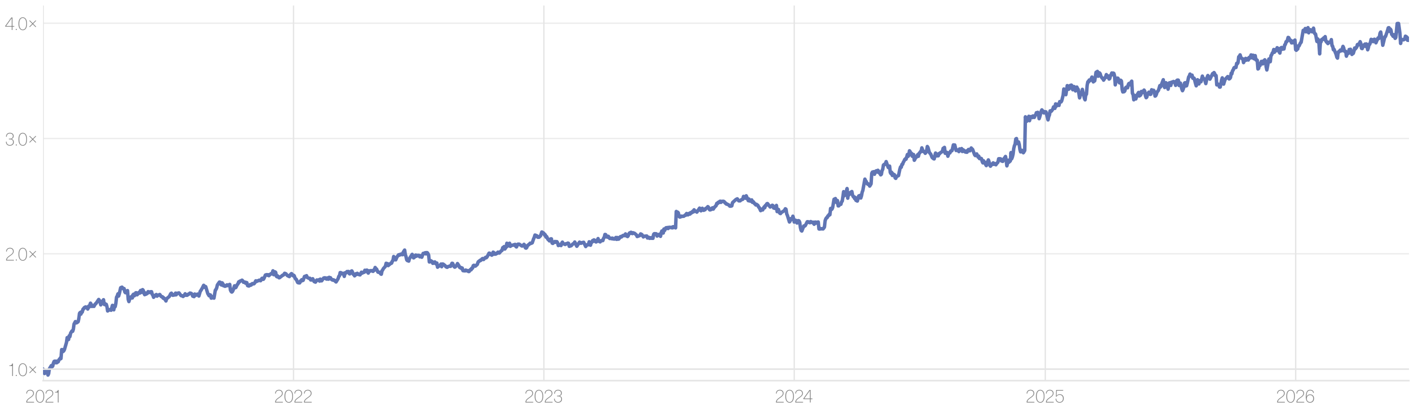
−12.2%	2024-01-12

CUMULATIVE RETURN



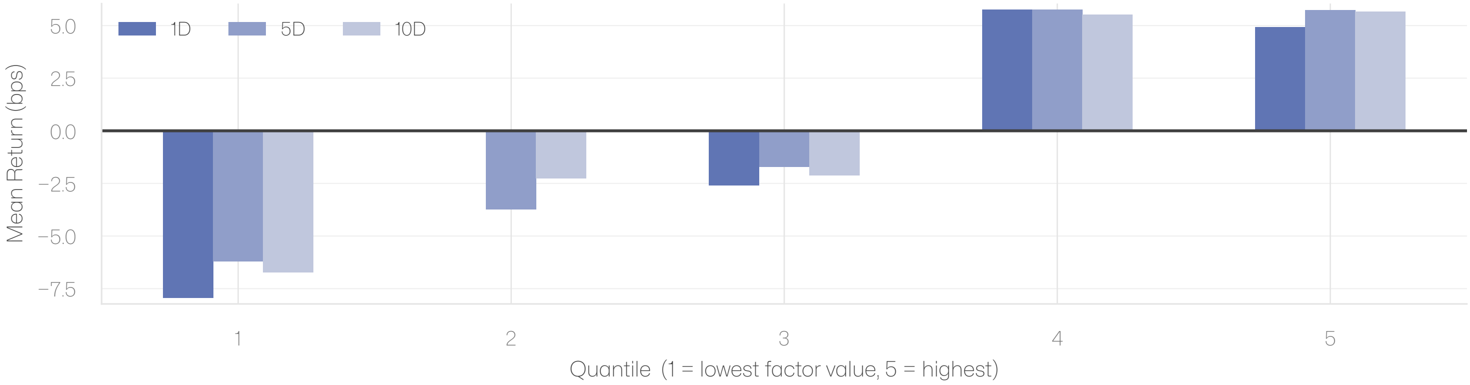
Note – Performance is for an illustrative single-factor portfolio (positions sized proportionally to the factor signal across the Top 40 universe, rebalanced daily); demonstrative only, not a tradable product. Past performance is not indicative of future results.

Factor Analysis

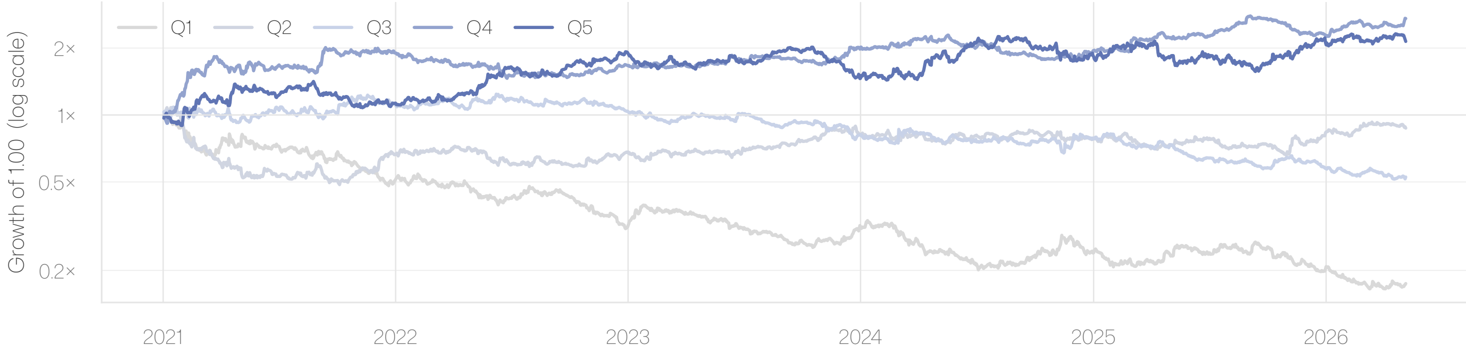
Download Factor Data (CSV) →

Diagnostics on the raw factor values, independent of portfolio construction: the quantile and IC plots show whether the signal cross-sectionally separates out- from under-performers, and how consistently. Computed point-in-time on the rolling Top 40 universe (the live factor spans many more tokens – see the raw factor-data CSV in the data room).

Mean Period Wise Return by Factor Quantile

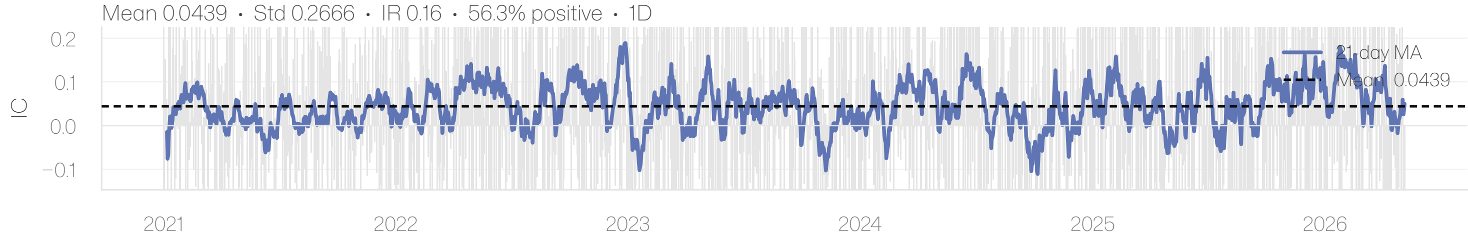


Cumulative Alpha by Quantile • demeaned, 1D



Information Coefficient (Spearman)

Mean 0.0439 • Std 0.2666 • IR 0.16 • 56.3% positive • 1D



ABOUT APERIODIC FACTORS

Aperiodic Factors publishes a catalog of cross-sectional, market-neutral crypto factors – each with point-in-time history and live signals – built for systematic research and backtesting. Full catalog, methodology and API at factors.aperiodic.io; see the materials below.
